PROFESSIONAL SUMMARY

Java Backend Developer with experience building and maintaining Spring Boot microservices, REST APIs, and PostgreSQL-based applications in production environments. Skilled in JWT authentication, Redis caching, TeamCity build management, and Grafana monitoring. Proven ability to optimize performance, troubleshoot production issues, and deliver scalable backend solutions within Agile development teams.

PROFESSIONAL EXPERIENCE

Junior Java Backend Developer – Finders | August 2025 – September 2026

- Developed and maintained 4 Spring Boot microservices supporting user management, messaging, and core business functionality.
- Implemented JWT-based authentication and authorization to secure REST APIs and user access.
- Developed and enhanced REST API endpoints to support application features and service integrations.
- Implemented asynchronous API processing alongside Redis caching and PostgreSQL query optimization to improve backend responsiveness and overall application performance.
- Configured Zuul API Gateway routes and supported microservice-to-microservice communication.
- Used Grafana dashboards, logs, and debugging tools to investigate and resolve staging and production issues.
- Executed TeamCity builds, resolved build failures, and supported approximately 5 deployments per week in an Agile team environment.

Software Development Intern – The Techsist (SMC-PVT) Ltd | June 2024 – August 2024

- Assisted in developing Java backend services and REST APIs for web application functionality.
- Developed and optimized SQL queries using MySQL and PostgreSQL to support application features and data operations.
- Contributed to web application development using HTML, CSS, JavaScript, Servlets, and JSP.
- Used Git for version control and participated in Agile development activities, including daily stand-ups and sprint planning.

TECHNICAL SKILLS

Programming: Java, SQL, Python, C/C++

Backend: Spring Boot, Spring Security, REST APIs, Microservices, JWT Authentication, API Gateway, Servlets, JSP

Databases: PostgreSQL, MySQL, Oracle

Caching & Monitoring: Redis, Grafana, Log Analysis

Tools: Git, GitHub, Jira, Postman, IntelliJ IDEA, DBeaver

Frontend: HTML5, CSS, JavaScript (Basic)

Development Practices: API Testing, Debugging, Backend Integration, Production Troubleshooting, Agile Development

PROJECTS

Messaging Platform | Java, MySQL

- Developed a messaging platform supporting message sending, receiving, storage, and conversation history.
- Designed MySQL database tables and implemented backend logic for message management and reliable data handling.

E-Commerce Store | Java, Spring Boot, MySQL

- Built an e-commerce prototype with product browsing, cart management, and order storage.
- Implemented CRUD operations and MySQL persistence for core application functionality.

EDUCATION

Bachelor of Science in Computer Science

Shaheed Zulfikar Ali Bhutto Institute of Science and Technology (SZABIST), Islamabad

Oct 2021 – Jun 2025

PROFESSIONAL DEVELOPMENT

- DataCamp – Introductory Python programming, including data types, control structures, functions, and libraries.
- Aptech Web Design – HTML, CSS, Bootstrap, and introduction to Spring Boot.
